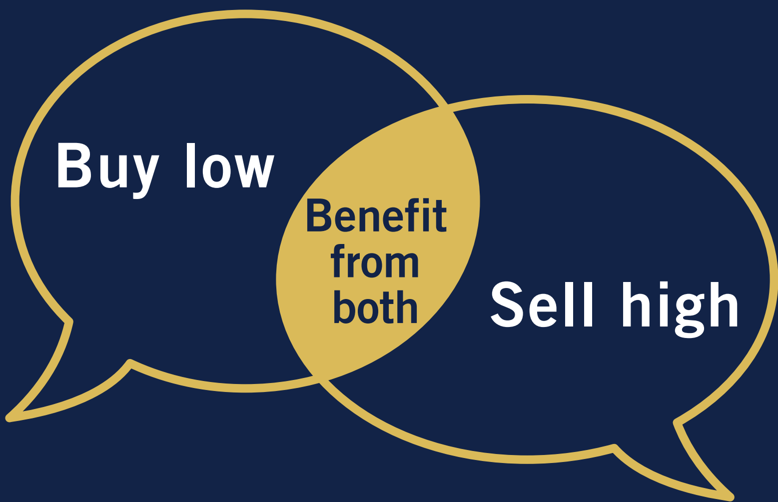
PGIM India Mutual Fund

An investment that benefits from automatic balance

Invest in PGIM India Balanced Advantage Fund

(An open-ended dynamic asset allocation fund)



#BenefitFromAutomaticBalance

PGIM India Balanced Advantage Fund

A fund that will dynamically manage the asset allocation across equity and debt based on the valuations of the equity markets so that the investors can buy low and sell high in the equity markets for long term wealth creation. A fund for

- An evolving generation of professionals and entrepreneurs who may not want to be tied down by traditional careers. Those who intend to have a dynamic career based on different skills, take risk to pursue business ideas, refuse to be boxed in by conventional income pursuits and looking for investment options that offer downside protection without compromising the return potential.
- Those who, while young with years ahead of them, still do not want to take a conventional approach and risk on their investment corpus.
- Investors who prefer to be smart about dynamically managing their investments to optimise their returns.
- Investors looking for a Tax Efficient Asset Allocation solution.

How does the model work ?

The allocation will be decided based on the Dynamic Advantage Asset Allocation Facility ("DAAAF") model. The model determines the equity allocation based on divergence of current(average of last 20 days) P/E of Nifty 50 Index with respect to its long-term average.

The model will use average of 15 year rolling P/E of Nifty 50 Index as a Long Term P/E. There are predefined bands for equity allocation based on the divergence of current P/E w.r.t average of Long term P/E of Nifty 50 Index. The model has a floor of min 30% exposure to directional equity.

In simple terms, the model works as follows:

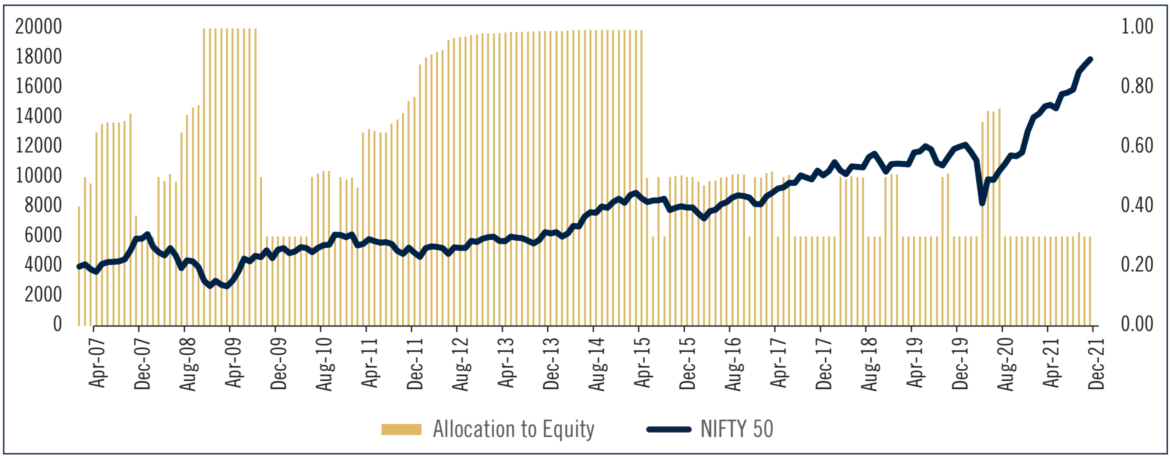
When the Equity Market is undervalued : Current P/E significantly lower than Long Term Average P/E	**The model recommends Entry and holding allocation to equities**
When the Equity Market is overvalued: Current P/E significantly higher than Long Term Average P/E	**The model recommends switch from equities to debt-based on the defined bands**
When the Equity Market valuation is reasonable compared to historical average	**The model recommends re-entry into equity**

Details as on November 30, 2021	
Long - term Average P/E of Nifty 50	20.44
Last 20 Days Moving Average of Nifty 50 P/E	25.05
Applicable P/E Variation Band	Between 21% to 30%
Re – balancing Allocation	No Action
Directional Equity Allocation for the month	Existing Levels will be maintained

Variation* from Long Term average PE	% move from Equity to Debt	% move from Debt to Equity
Less than - 20%		100%
Between -20% and -11%		50%
Between -10% and 0%		10%
Between 1% and 10%	No Action	No Action
Between 11% and 20%	No Action	No Action
Between 21% and 30%	No Action	No Action
Between 31% and 40%	50%**	
Above 40%	100%*	

**PE variation is defined as the deviation of trailing PE of Nifty 50 Index (observed on a 20 days moving average basis) from 15 year rolling average PE of Nifty 50 Index. ** This will be subject to minimum floor of 30% to directional equity.*

Model Equity Allocation versus NIFTY 50 levels



Model efficacy in various phases of market

Bull Phase	Absolute Returns during the Bull Phase		3-Year Absolute Returns post Bull Phase		3-Year CAGR post Bull Phase	
	Nifty 50	Model	Nifty 50	Model	Nifty 50	Model
January 2007 – January 2008	29%	34%	4%	30%	1%	9%
March 2009 - December 2010	129%	110%	2%	16%	1%	5%
May 2014 – March 2015	27%	28%	18%	22%	6%	7%

Simulation shows that the model could have delivered superior returns as compared to Nifty 50 with lower volatility.

Monthly Rolling Returns Based on an Investment Period of*		Total Observations	Key Parameters					Standard Deviation	
			Less than 0%	0-5%	5-8%	8-12%	Greater than 12%		
1 Year	Model	168	13.10%	7.14%	11.90%	22.02%	45.83%	17.41%	
	Nifty 50	168	26.19%	8.33%	7.74%	12.50%	45.24%	23.98%	
3 Years	Model	144	0.00%	3.47%	16.67%	34.03%	45.83%	15.68%	79.86%
	Nifty 50	144	4.17%	19.44%	18.75%	26.39%	31.25%	19.51%	
5 Years	Model	120	0.00%	0.00%	7.50%	43.33%	49.17%	8.46%	92.50%
	Nifty 50	120	1.67%	17.50%	19.17%	28.33%	33.33%	14.96%	

** Calculated on a monthly basis; Source: Internal Research. Rolling Returns are the annualized returns of a scheme/index/model taken for a specified period (rolling returns period) on every day/week/month and taken till the last day of the duration. In the above tables, the returns are the Compounded Annual Growth Returns (CAGR) over the rolling returns period on a monthly basis.*

For instance, for an investment period of 3 years, the model has given returns of 8% and above for over 75% of the time.

The returns illustrated above are based on the following assumptions.

Assumptions for performance evaluation

- Nifty 50 + CRISIL Liquid Fund Index for the evaluation of the model.
- Period of January 2007 to November 2021 to include the two largest crashes.
- Rolling returns calculated on a monthly basis since model allocates assets once every month.
- All of the above returns are calculated on a pre-tax basis.

Disclaimer: The back testing results given are merely for the purpose of understating how the model works. The above table / graph is for illustrative purposes only and should not be construed in any way as guaranteed or promised returns from the model or the Scheme. Past Performance may or may not be sustained in the future.
