### A case for investing in Emerging Market equities.

Dear investors

We are now in the last month of what can be termed as an unprecedented year. At the beginning of the year no one would have envisaged the way the year would pan out. We experienced a major human crisis that ultimately impacted economies around the globe. The spread of the infection forced various governments to enforce stringent lockdowns. It dealt a severe blow to consumer facing businesses like hotels, leisure, restaurants, travel etc. Unemployment rose to record levels. Economies coming to a standstill prompted central banks around the globe to slash interest rates and pump an unprecedented amount of liquidity into the global system. Given the bleak outlook prevailing at that point of time, global liquidity in the first phase chased safer assets like bonds and drove the yields to record lows. Nearly USD 17 Trillion worth of bonds have a negative yield i.e. investors were willing to forego gains and even a portion of principle on the assumption that if they didn't lock it in now, their money could lose much more value later.

However, what surprised most economists was the sharp recovery in the economic activity for the July to Sep quarter as the first wave started receding and economies started coming out of lock downs. Enterprising investors realised that things were not as bad as they were expected to be. Human ingenuity and resilience ensured that at least some sectors turned the crisis into an opportunity. This led to a sharp rally in the markets leading to the birth of a new term - the "K shape" recovery, meaning a few sectors gained while some traditional sectors were losers. Now we seem to be coming further out of the dark period. Vaccines for the dreaded COVID 19 have been developed, approved and vaccinations will start in the near term. Economies and businesses expect normalcy to resume in 2021. The fear of a second wave hitting hard is relegated to the background as vaccines are likely to stop the spread. Low yield on assets, global liquidity, promise of central banks to hold interest rates lower for longer has prompted global investors to explore various risk assets. Dollar dominance seems headed for a long pause. Like in the past, the "risk on" approach of global investors manifested itself in the form of the flows directed to emerging markets (EMs). As part of this allocation India received record FII flows in November, upwards of 50000 cr. That is the highest monthly flow in the last two decades. The logical question that would come to mind would be that the pain on the street is real, job losses, pay cuts, bankruptcies which cannot be wished away. Then what prompts global investors to take the risk of emerging markets.

We believe that liquidity is just one factor. There are structural tailwinds that are favourable for EMs. Emerging economies have transitioned from being cheap suppliers of labour and raw materials to being at the forefront of service and tech sectors. 30% of the Fortune 500 companies now coming from EMs is a testimony to the fact. The efforts of respective governments, policy makers and the private sector have culminated in the rise of a middle class that is driving consumption of goods and services. In the next decade nearly 2/3rds of the burgeoning middle class will be residing in Emerging Markets. The confluence of factors is ensuring that ~60% of the global GDP growth is coming from EMs that are home to a younger population as compared to their developed counterparts. This pandemic has accelerated the adoption of digitization and it will transform multiple industries while opening up new areas of growth.

Compared to their developed market (DM) counterparts, EMs have been relatively less effected by COVID. The fiscal and monetary response by EMs have been more calibrated than DMs. The possibility of repeat lockdowns are lower given economic imperatives. Reserves are stronger. There are also more scalable companies in emerging markets now compared to before.

We have to be mindful of risks too. Currency appreciation is one. When the rupee depreciates it adds to an Indian investors returns and vice versa. Regulatory and policy initiatives by emerging market governments is another.

To help you participate in an opportunity that is roughly 8 to 10 times larger than the Indian markets, we have launched the PGIM India Emerging Markets Equity Fund. It is a feeder fund that feeds into PGIM Jennison Emerging Market Equity Fund. The underlying fund is a sector, region and benchmark agnostic one with a concentrated portfolio of 35-45 stocks. Managed by a hugely experienced team from Jennison, the fund is a stellar performer across time frames. The fund focusses on buying market leading companies with unique business models, positively inflecting growth rates, and long duration competitive advantages. It is a complementary portfolio to our PGIM India Global Equity Opportunities Fund. It is a good vehicle to gain exposure to themes like - on demand economy, AI robotics, data sciences that are either absent or are not adequately represented on the Indian bourses. Of- course you should allocate provided it fits into your overall financial plan and asset allocation. That will help mitigate some risks as mentioned above. Please do consult your MFD/RIA or get in touch with us to know more about the product.

Wishing you a happy and healthy holiday season and new year.

## Equity Market

### The market that was

The Nifty50 Index rose sharply in November (+11.4%), touching new lifetime highs and outperforming regional markets such as Indonesia, Taiwan, Hong Kong, Malaysia, and Philippines. A gradual improvement in economic activity, driven by pent-up and festive demand, pick-up in manufacturing activity and a much better results season compared to expectations are key reasons for the current rally. The broader markets also outperformed with Nifty Midcap rising 15.5% and Small Cap rising 13%.

The Indian markets were further supported by a global risk-on rally which was driven Joe Biden winning the US Presidential elections, positive news flows around COVID19 vaccination and dollar weakness (DXY fell by -2.3% in Nov). Emerging markets saw strong FII inflows during the month, and India received its highest ever monthly inflow of US\$ 9.4 billion (a little over US\$ 2 billion could be attributed to MSCI re-balance and increase in Foreign Ownership limits).

Banking, Metals and Automobile sectors were the key outperformers during the month. The Banking sector witnessed a sharp rally (+23%) on the back of inexpensive valuations, better collection efficiency levels and reducing asset quality pressures. Metal stocks (+24%) rallied on the back of dollar weakness and Automobile sector (+14%) due to pent-up demand and gradual re-opening of the manufacturing sector. However, defensive sectors such as I.T., Pharmaceuticals and FMCG lagged.

On the COVID-19 front, there is a marked improvement and relief. After touching a peak of about 97,000 new cases per day in September, there is a gradual decline to about 30,000 cases in mid-November. Though cases spurted after the festive season, the last few days again saw a drop in new cases to about 40,000 per day.

GDP declined by -7.5% y/y in 2Q (vs -23.9% in 1Q) which was much better than street expectations, led by the manufacturing sector which reported flat growth during the 2Q v/s -39% yoy decline in 1Q. India's fiscal deficit widened to over Rs9.5 trn, or 127% of the annual target as of October end. The India Manufacturing PMI declined to 56.3 in November 2020 from 58.9 in October, below market consensus of 57.3. This was the lowest reading in three months, but the latest reading was still consistent with a sharp rate of expansion, amid ongoing loosening of COVID-19 restrictions.

2QFY21 (June-September) net profits of the Nifty50 Index increased by 16.4% yoy versus expectation of marginal decline. EBITDA increased by 9.4% yoy versus expectations of a 2.5% decline. Almost all sectors performed well with most sectors beating estimates. The better-than-expected results reflect (1) stronger-than-expected sales and volumes across sectors and (2) lower-than-expected costs as companies continue to maintain tight control on costs. Aggregate consensus for FY21 and FY22 earnings saw upward revision after the results.

After turning buyers in October, FIIs turned even more aggressive in November and recorded their highest ever monthly net inflow into India equities. FIIs net bought in November to the tune of US\$ \$9.4bn, taking their YTD inflows to close to US\$ 16bn. On the domestic front, DIIs remained sellers due to redemption pressures and sold worth US\$ 6.5bn during the month.

### Going Forward

After a sharp rise in global and EM markets during the month, we can expect some consolidation in the near term. The gradual opening of the manufacturing sector, moderation in GDP decline and much better Q2 earnings season vs expectations are some of the positives as India adjusts to the new normal. This time we expect the rural economy to lead the recovery vs urban markets as it has been less affected by the COVID19 crisis.

Positive developments around fast-acting medications or vaccines for COVID19 would be a key supporting factor for global as well as Indian equity markets. India will continue to remain one of the fastest growing emerging markets in the world and potential long-term equity returns will continue to attract sizeable inflows. In terms of earnings, while FY21 is likely to be a muted year (primarily because of the pandemic), recovery expectations in H2 and a healthy exit run rate would provide a robust platform for earnings growth recovery from FY22 onwards. As companies and economies are adjusting to a new normal, structural changes are taking place across multiple sectors. While some changes may be temporary, some changes are here to stay. We all are adapting to the same, and we are mindful of the same in our portfolios as well as in our endeavor to provide better risk-adjusted returns to our investors.

## Debt Market

### Macro Review

CPI for October 2020 continued to remain stubbornly high, printing at 7.6% (up from 7.3% in September). While food continues to remain the culprit as in the previous months, core inflation in excess of 5% also remains a source of worry. As the economy gradually emerges from the lockdown and activity levels rebound to pre-covid levels, we expect upward impulses to the core.

So, even as the headline may benefit from falling food inflation, core may pose problems as recovery gathers pace. Already crude oil is in the mid 40s and is showing signs of stabilising around these levels. While most of the developed markets continue to battle the second / third wave as winter sets in, the roll-out of the vaccine (expected in the US as early as December itself) globally in the first quarter may accelerate recovery as we go through 2021.

As such, while CPI is likely to soften, we expect the average for FY 2021 to be closer to 6% and to range in the 5.5% to 6% band for H1-FY 2022.

### Liquidity and Rates

Liquidity conditions continued to remain ultra-benign with daily system average liquidity now crossing the INR 5 trillion comfortably. The woes of RBI are now being compounded as FDI flows are being supplemented by strong FII inflows as well. November was one of the strongest flows for equity ever, registering inflows of INR 69,476 cr. For the calendar year 2020, equity has witnessed inflows of INR 1.19 trillion, completely erasing outflows in debt which stood at INR 1.07 trillion in the same period.

For context, average daily LAF balances in September, for instance, stood at INR 3.31 trillion and at INR 3.68 trillion in August.

### GDP data – Q2/FY 2020

India's second quarter GDP for the period from July to September 2020, rebounded strongly. For the 3-month period, the GDP contracted by 7.5% (over the previous year), much lower than the -23.9% (year / year) contraction of the first quarter and also lower than the consensus estimates ranging from -7 to -9%. GVA (Gross value added = GDP plus taxes minus subsidies) contracted by a lower amount of 7% in Q2.

Among the highlights, drivers of the rebound included a pick-up in agriculture (+3.4% y/y – flat vs Q1) and industry (much lower contraction of -2.1% as against -38.1% in Q1 FY 21). Industry constituents that did well include electricity, home goods, power sales, cement dispatches, consumer durables, auto etc. Part of the pick-up was led by pent-up demand and buying for the festive season. High frequency indicators have been signaling a pick-up in economic activity towards the end of Q2 which is also reflected in the numbers.

Alternatively, viewed on the expenditure side, the main drivers to a better performance in Q2 was private consumption (aided by the stimulus and gradual unlocking of the economy, pent-up demand and the festive season), net exports and gross fixed capital formation.

The views of the Fund Manager should not be construed as an advice and investors must make their own investment decisions regarding investment/disinvestment in securities market and/or suitability of the funds based on their specific investment objectives and financial positions and using such independent advisors as they believe necessary. None of the information contained in this document shall be constituted as a recommendation to buy or sell any particular security. Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

### Outlook

While the second quarter performance has been promising, the outlook for the second half of FY 2021 will depend on continuation of demand post the festive season. While Q2 accounted for a lot of pent-up demand from Q1, spillover into Q3 and Q4 could be minimal. However, ground level activity as reflected in the high frequency data reflects that demand in tier 2, 3, 4 cities and towns is re-emerging.

The combination of manufacturing incentives for various sectors under the PLI (Production Linked Incentive schemes) and the impact of lower interest rates should also play a role in enabling demand pick-up. Financial conditions in India in the last three years from 2017-March 2020 have been particularly tough, stifling demand and investment. Impact of stimulus (putting more money in the hands of rural population, agri sops), higher forex flows (both FDI and FII) plus RBI's buying activity in Government bonds (both G Secs and SDL) is also aiding liquidity.

With CPI likely to stay well over 4%, monetary space for RBI is limited. Coupled with the rebound, prospects of a rate cut appear low. However, RBI is likely to maintain the accommodative monetary stance for the foreseeable future as was reiterated in the previous policy, given the need for effective rate transmission which is still an unfinished agenda.

### Recommended Products

In this background of an improvement in economic outlook, macro data and improving sentiments, we recommend short and mid duration products in the average maturity range up to 5 years, given the recent macro data on Q2 GDP and CPI trajectory. We recommend the PGIM India Banking & PSU Debt Fund and PGIM India Premier Bond Fund, as suitable investment options for investors seeking moderate duration exposure and a preference for high quality (AAA) portfolio. PGIM India Dynamic Bond Fund is recommended for Investors with a slightly higher appetite for volatility.

<sup>^</sup> Scheme Benchmark. # Standard Benchmark. \*Based on standard investment of ₹ 10,000 made at the beginning of the relevant period. Past performance may or may not be sustained in future and should not be used as a basis for comparison with other investments.

The above returns are as on November 27, 2020. For SIP Performance, please refer page no. 30

## The benchmark of the scheme has been changed from BSE 200 Index to CRISIL Balanced Fund - Aggressive Index w.e.f. close of business hours March 04, 2016, pursuant to change in fundamental attributes of the scheme. Hence, 3 years data of qualitative/volatility measures has also been shown to reflect the correct risk attribute of the scheme. Further, the name of the benchmark has been changed from CRISIL Balanced Fund - Aggressive Index to CRISIL Hybrid 35+65 - Aggressive Index w.e.f. January 31, 2018.

The debt component of the benchmark is TRI since inception. For equity component of the benchmark, i.e. S&P BSE 200 PRI value is used till 31st July 2006 and TRI is used since 1st Aug 2006.

Scheme performance may not strictly be comparable with that of its Additional Benchmark in view of balanced nature of the scheme where a portion of scheme's investments are made in debt instruments.

Alok Agarwal (Equity Portion) is managing this scheme since June 2016 and Kumaresh Ramakrishnan (Debt Portion) is managing this scheme since April 05, 2018. For performance of schemes managed by Kumaresh Ramakrishnan refer page no. 11, 14-15, 18-23, 25, 29. For performance of schemes managed by Alok Agarwal refer page no. 7, 11, 13, 15, 29

Different plans have a different expense structure. For Total Expense Ratio as on November 30, 2020 refer page no. 29.

# PGIM INDIA EMERGING MARKETS EQUITY FUND

(Earlier known as PGIM India Euro Equity Fund)

An open ended equity fund of fund scheme investing in PGIM Jennison Emerging Markets Equity Fund

ICRA has assigned the "[ICRA]A1+mfs" (pronounced as ICRA A one plus m f s) rating to the PGIM India Overnight Fund. Schemes with "[ICRA]A1mfs" rating are considered to have very strong degree of safety regarding timely receipt of payments from the investments that they have made. Modifier ["+" (plus)] can be used with the rating symbol to reflect the comparative standing within the category.

ICRA has assigned the "[ICRA]AAA+mfs" (pronounced as ICRA triple A m f s) rating to the PGIM India Insta Cash Fund, PGIM India Ultra Short Term Fund, PGIM India Banking and PSU Debt Fund, PGIM India Dynamic Bond Fund and PGIM India Premier Bond Fund. Schemes with this rating are considered to have the highest degree of safety regarding timely receipt of payments from the investments that they have made.

The ratings should, however, not be construed as an indication of the performance of the Mutual Fund scheme or of volatility in its returns. For complete rating scale and definitions please refer to ICRA's Website [www.icra.in](http://www.icra.in) or other ICRA Rating Publications ICRA Credit Quality Rating Methodology for debt mutual fund schemes

ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores".

These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

# SIP Performance (CAGR)

Details as on November 27, 2020

The fund offers flexible and convenient Systematic Investment Plan (SIP) facility. To illustrate the advantages of SIP investments, this is how your investments would have grown if you had invested ₹ 10,000 on the 1st Business day of every month over a period of time

<sup>^</sup>Benchmark.

NA - Not Available.

The above performance is for Regular Plan - Growth Option. Different plans have a different expense structure. Past performance may or may not be sustained in future and should not be used as a basis for comparison with other investments.

## How to read the Factsheet

**Fund Manager:**

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

**Application Amount for Fresh Subscription:**

This is the minimum investment amount for a new investor in a mutual fund scheme.

**Minimum Additional Amount:**

This is the minimum investment amount for an existing investor in a mutual fund scheme.

**Yield to Maturity:**

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

**SIP:**

SIP or systematic investment plan works on the principle of making periodic investment of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

**NAV:**

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

**Benchmark:**

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10- year Gsec.

**Entry Load:**

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/ agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs. 101.

**Note:** SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

**Exit load:**

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1%, the redemption price would be Rs. 99 per unit.

**Modified Duration:**

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

**Macaulay Duration:**

The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

**Standard Deviation:**

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

**Sharpe Ratio:**

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

**Beta:**

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

**AUM:**

AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

**Holdings:**

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/ securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

**Nature of Scheme:**

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

**Rating Profile:**

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

**Portfolio Turnover:**

Portfolio Turnover is a measure of how frequently assets within a fund are bought and sold by the managers.

**R-Squared:**

R-Squared is a statistical measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

**Average Maturity:**

In a mutual fund containing debt securities, Average Maturity is the average amount of time until the debt securities mature.

**Portfolio Yield:**

Portfolio Yield is computed by determining the cash flows for the portfolio and determining the interest rate that will make the present value of the cash flows equal to the market value of the portfolio.

**Total Expense Ratio:**

Weighted Average i.e. Total Expense of the month / average Asset / number of days in month\* days in a year.

## Stop trying to time the market ! Invest in a P/E based strategy

In the equity markets, one should invest when the valuation (P/E) is low, not the index level. Simply put we should invest when market is cheaper and the P/E ratio helps us decide this.

- Methodology adopted for P/E based Strategy illustrations:
  - Asset allocation is done on the basis of the table shown here;
  - The equity market/component is represented by NIFTY 50;
  - The balance allocation (i.e. portfolio value minus equity allocation) is considered as debt component;
  - Debt component returns is considered at 6% per annum for the calculation purpose;
  - Any allocation into or out of equity is carried out on the first working day of the month;
  - Variation is defined as the deviation of 20 day Average trailing P/E of NIFTY 50 as at the month-end, compared with its Long-Term Average P/E (i.e. from 1st Jan. 1999).
